

**NATIONAL PRIMARY CARE INFECTIOUS DISEASES
SENTINEL SURVEILLANCE FORTNIGHTLY REPORT**

Combining data from The Australian Sentinel Practices Research Network (ASPREN)* and the Victorian Sentinel Practitioners Influenza Network (VicSPIN)*

No. 24, 2022 - 21st November — 4th December 2022

NATIONAL SUMMARY

 Influenza-like-illness levels remain steady below baseline levels

0 Case of influenza have been detected in this reporting period
0 x Influenza A
0 x Influenza B

0% Influenza positivity during the reporting period.

161 Cases of influenza have been detected this year:
161 x Influenza A
0 x Influenza B

 Gastroenteritis levels remain steady below baseline levels

**SYNDROMIC SURVEILLANCE
REPORTING**

Reports were received from 215 reporters from 8 states and territories during the reporting period. During weeks 47 and 48 reporters saw a total of 31,012 patients.

INFLUENZA-LIKE-ILLNESS (ILI)

Nationally, ILI notifications decreased during the period with 50 notifications being reported in weeks 47–48. ILI rates reported in this period were 2 cases per 1000 consultations (weighted). This was slightly less than the previous fortnight where rates were 3 and 2 cases per 1000 consultations in weeks 45 and 46 respectively. For the same reporting period in 2021, ILI rates were significantly lower at 1 case per 1000 consultations for weeks 47 and 48 (see Fig. 5).

GASTROENTERITIS

Nationally, gastroenteritis notifications significantly increased during the period with 73 notifications reported. Gastroenteritis rates reported in this period slightly increased to 2 and 3 cases per 1000 consultations in weeks 47 and 48, compared to 2 cases per 1000 consultations in weeks 45 and 46 respectively (see Fig. 5).

* ASPREN is funded by the Commonwealth's Department of Health, Office of Health Protection, Vaccine Preventable Disease Surveillance Section.

* VicSPIN is funded by Melbourne Health and the Victorian Infectious Diseases Reference Laboratory.

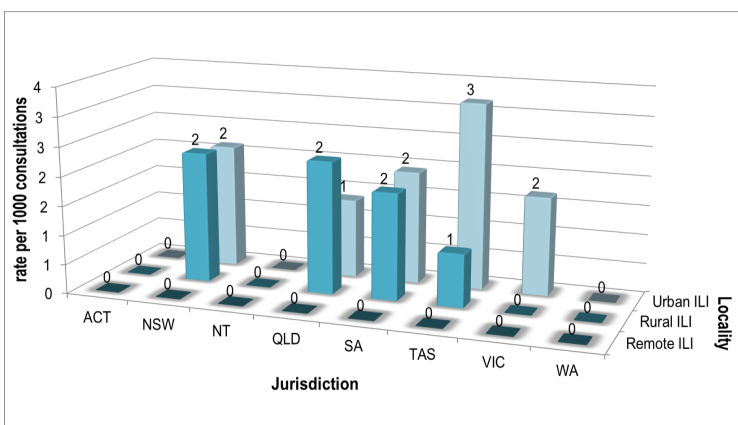

Figure 2. ASPREN rate of ILI by locality and jurisdiction, weeks 47 - 48, 2022.

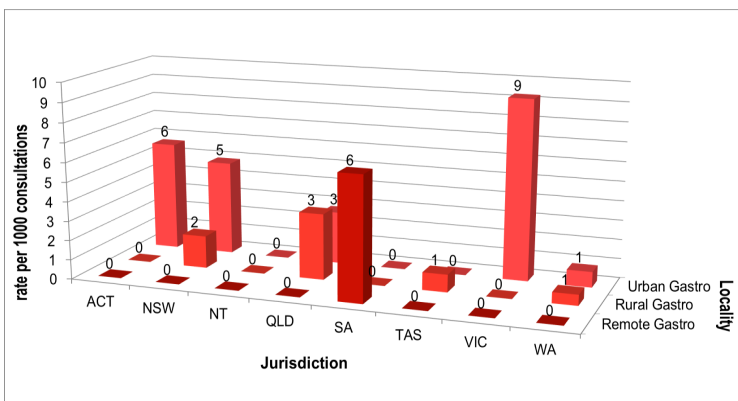

Figure 3. ASPREN rate of gastroenteritis by locality and jurisdiction, weeks 47 - 48, 2022.

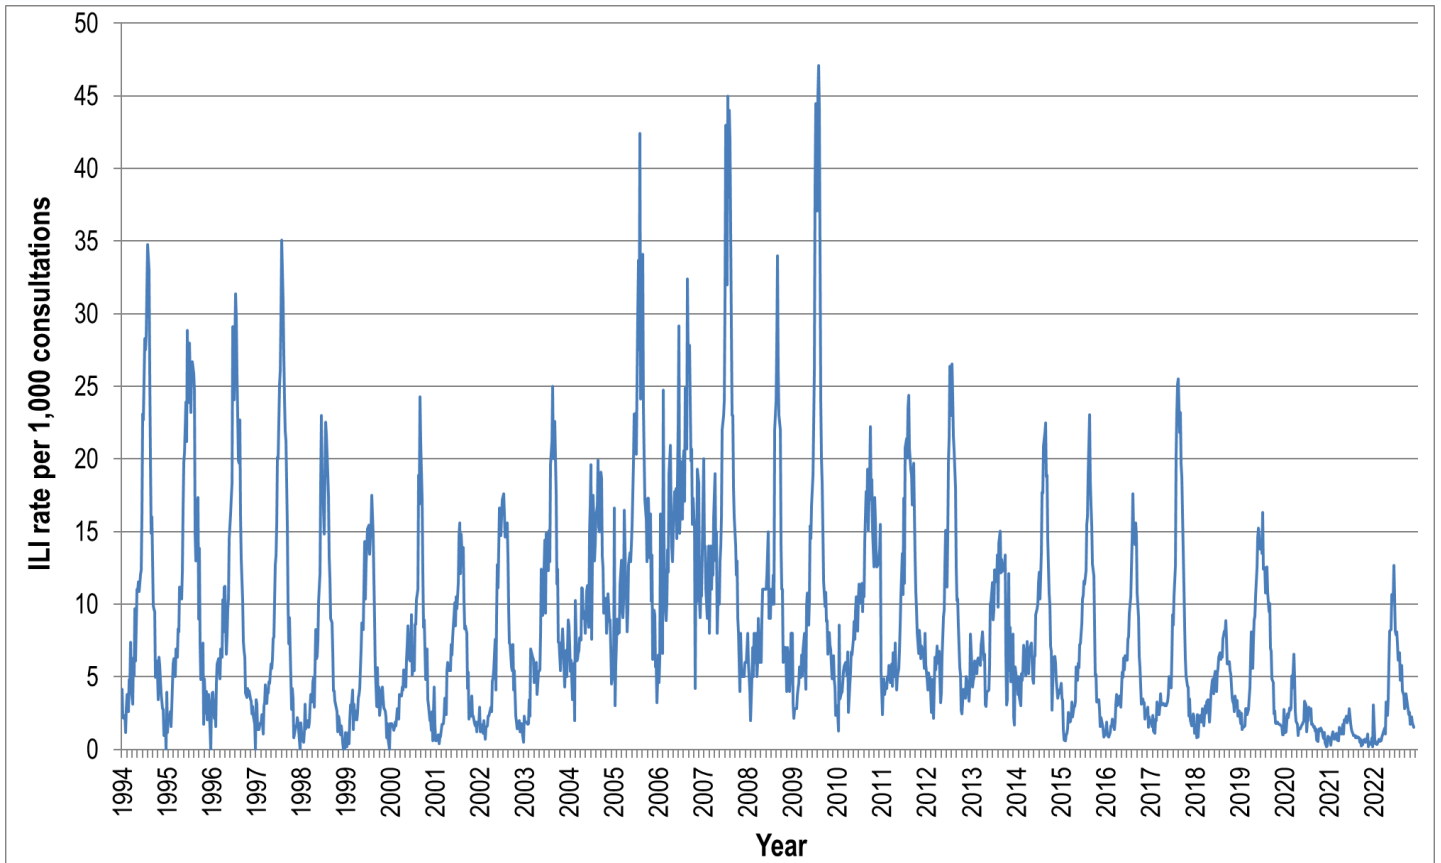

Figure 4. ASPREN ILI rates 1994 - 2022.

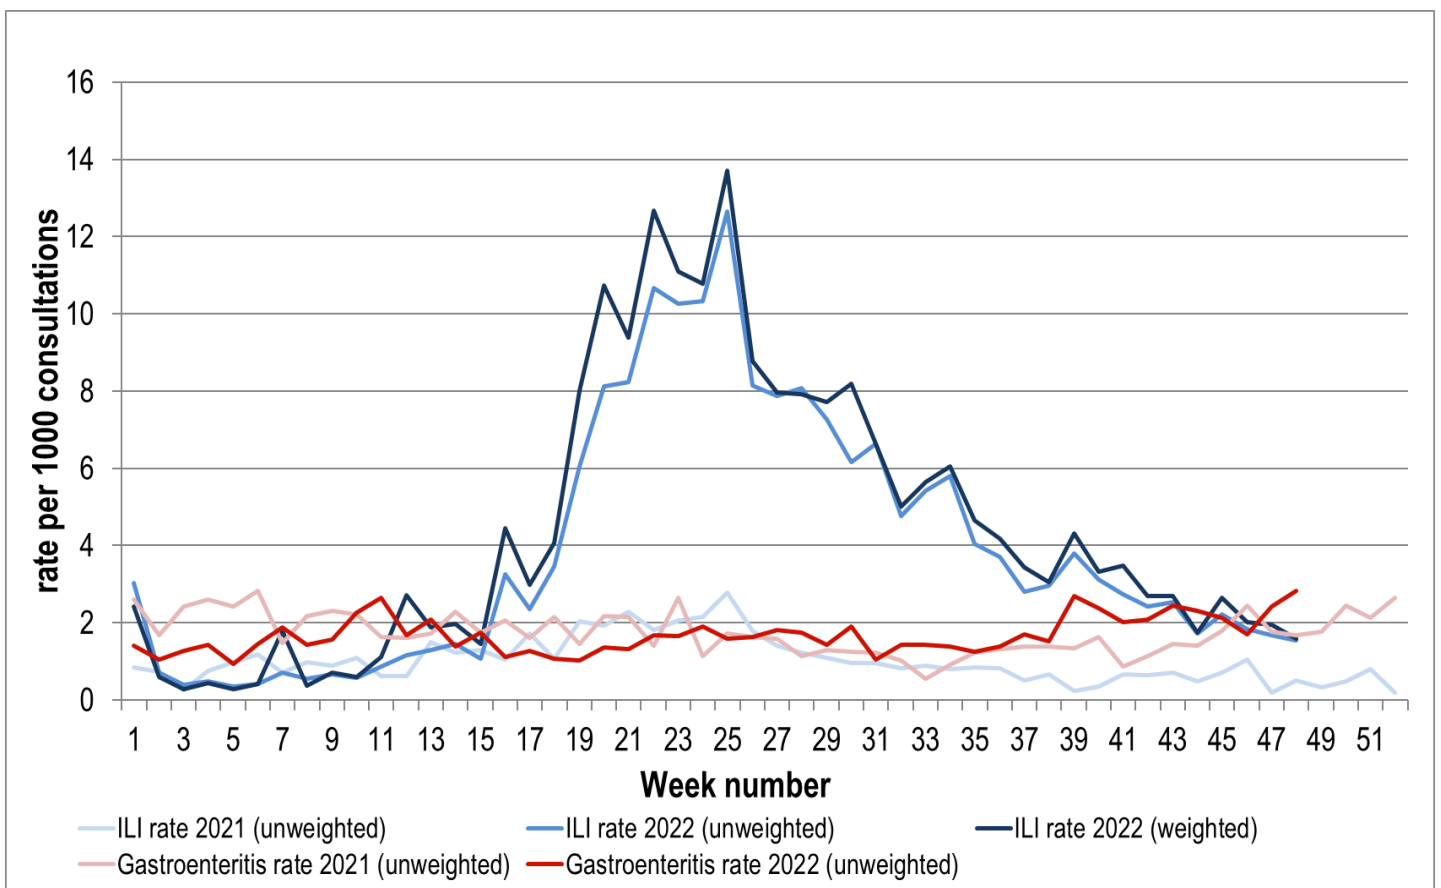

Figure 5. ASPREN + VicSPIN ILI and ASPREN gastroenteritis rates 2021-22. Weighted rates are weighted to account for population size differences between jurisdictions, using population estimates from the 2011 Australian Census.

VIROLOGICAL SURVEILLANCE

52% of all ILI patients were swab tested during weeks 47 and 48 (see Figure 6).

No cases of Influenza A and 1 case of SARS-CoV-2 were detected during this period. There were 6 cases of Rhinovirus detected making it the most common respiratory virus circulating the nation at present (see figure 8).

Viral laboratory data are provided by SA Pathology and VicSPIN laboratories.

	Reporting Period 21 Nov - 4 Dec 2022	YTD 1 Jan - 4 Dec 2022
Total number of ILI notifications	50	3022
Number of swab tests performed	26	1014
% ILI patients tested	52%	34%
% of swab tests positive for influenza	0%	16%
