

**NATIONAL PRIMARY CARE INFECTIOUS DISEASES
SENTINEL SURVEILLANCE FORTNIGHTLY REPORT**

Combining data from The Australian Sentinel Practices Research Network (ASPREN)* and the Victorian Sentinel Practitioners Influenza Network (VicSPIN)*

No. 26, 2022 - 19th December — 31st December 2022

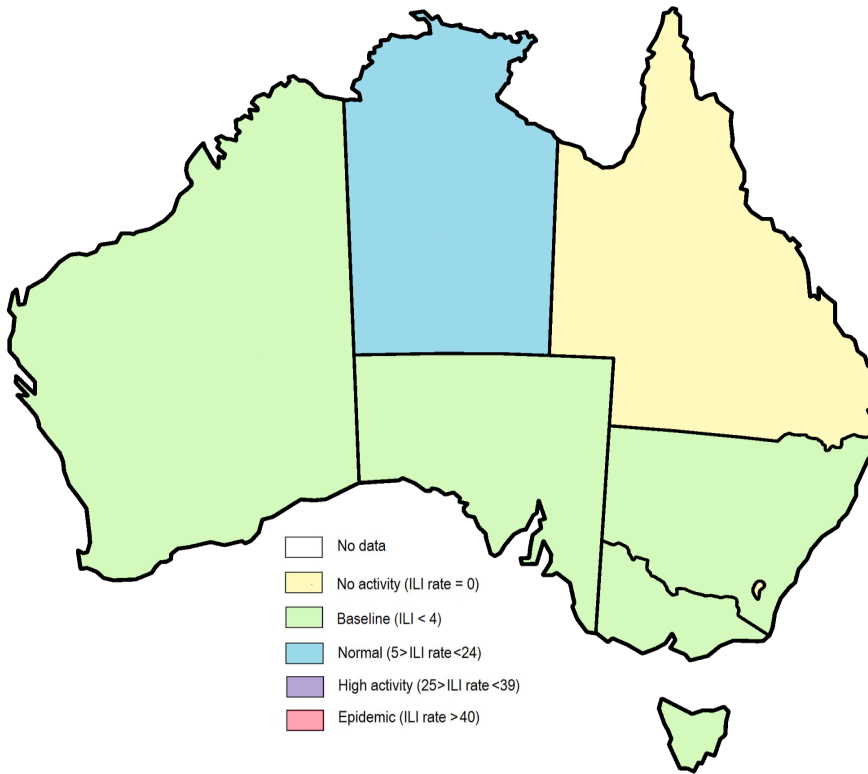

Figure 1. Map of ILI activity by jurisdiction, weeks 51 - 52, 2022.

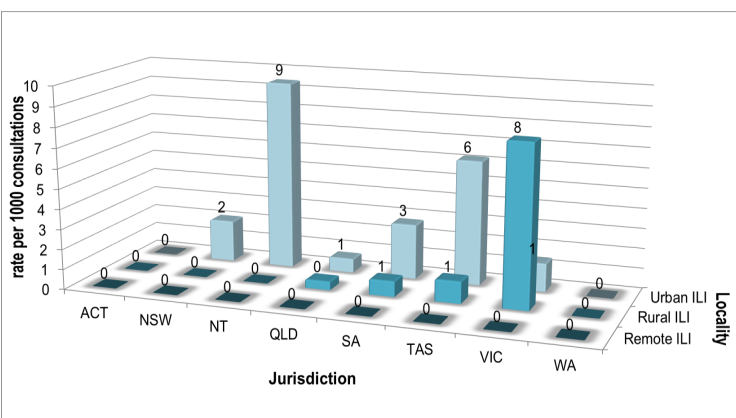

Figure 2. ASPREN rate of ILI by locality and jurisdiction, weeks 51 - 52, 2022.

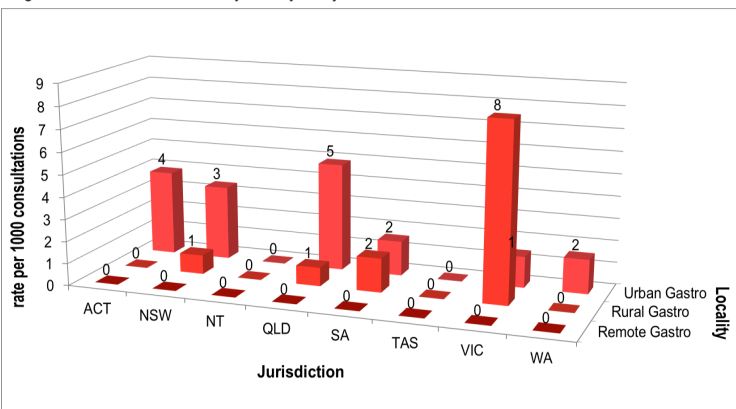

Figure 3. ASPREN rate of gastroenteritis by locality and jurisdiction, weeks 51 - 52, 2022.

NATIONAL SUMMARY

0 Influenza-like-illness levels remain steady below baseline levels

0 Case of influenza have been detected in this reporting period
0 x Influenza A
0 x Influenza B

0% Influenza positivity during the reporting period.

162 Cases of influenza have been detected this year:
162 x Influenza A
0 x Influenza B

0 Gastroenteritis levels remain steady below baseline levels

**SYNDROMIC SURVEILLANCE
REPORTING**

Reports were received from 176 reporters from 8 states and territories during the reporting period. During weeks 51 and 52 reporters saw a total of 18,262 patients.

INFLUENZA-LIKE-ILLNESS (ILI)

Nationally, ILI notifications significantly decreased during the period with 25 notifications being reported in weeks 51—52. ILI rates reported in this period were 4 and 2 cases per 1000 consultations (weighted). This was higher than the previous fortnight where rates were 3 and 1 cases per 1000 consultations in weeks 49 and 50. For the same reporting period in 2021, ILI rates were significantly lower at 1 case per 1000 consultations for weeks 51 and 52 (see Fig. 5).

GASTROENTERITIS

Nationally, gastroenteritis notifications remained steady during the period with 38 notifications reported. Gastroenteritis rates reported in this period remained steady at 2 cases per 1000 consultations in weeks 51 and 52, compared to 2 and 1 cases per 1000 consultations in weeks 49 and 50 respectively (see Fig. 5).

* ASPREN is funded by the Commonwealth's Department of Health, Office of Health Protection, Vaccine Preventable Disease Surveillance Section.

* VicSPIN is funded by Melbourne Health and the Victorian Infectious Diseases Reference Laboratory.

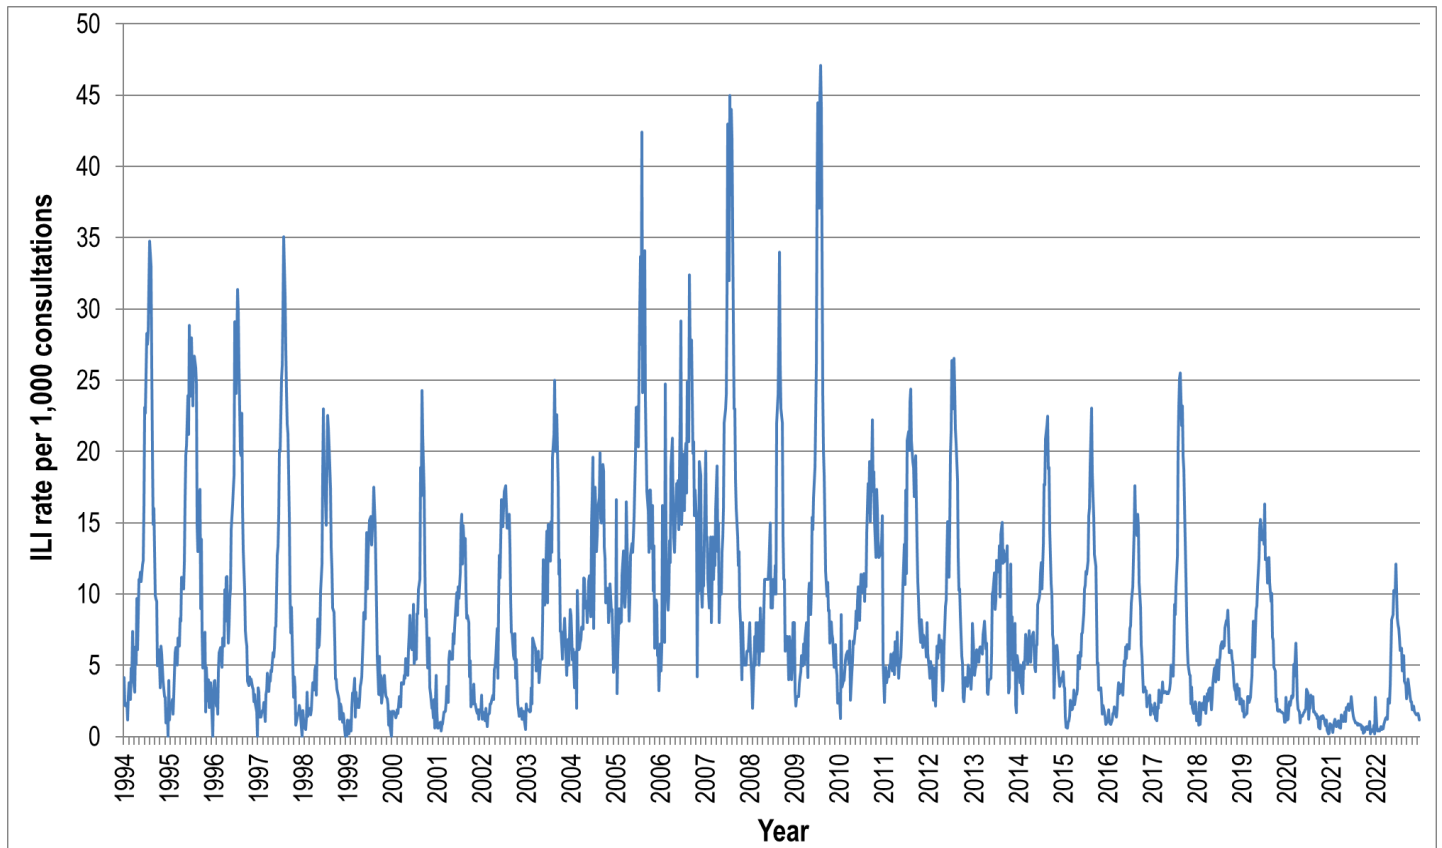

Figure 4. ASPREN ILI rates 1994 - 2022.

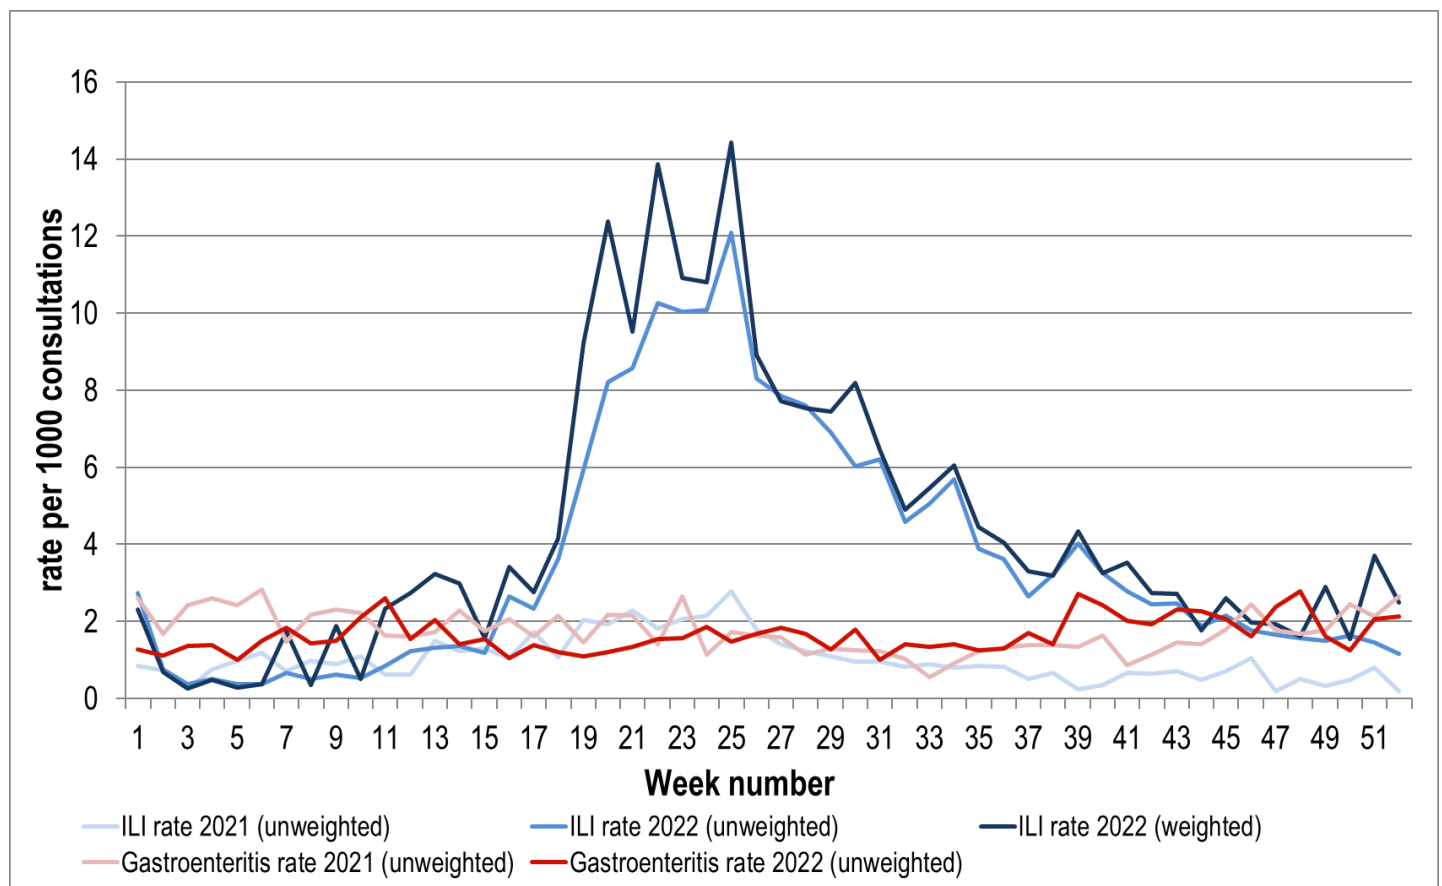

Figure 5. ASPREN + VicSPIN ILI and ASPREN gastroenteritis rates 2021-22. Weighted rates are weighted to account for population size differences between jurisdictions, using population estimates from the 2011 Australian Census.

VIROLOGICAL SURVEILLANCE

32% of all ILI patients were swab tested during weeks 51 and 52 (see Figure 6).

0 case of Influenza A and 2 cases of SARS-CoV-2 were detected during this period. There were 2 cases of Rhinovirus detected making it the equal most common respiratory virus circulating the nation at present (see figure 8).

Viral laboratory data are provided by SA Pathology and VicSPIN laboratories.

| | Reporting Period | YTD |
|--|----------------------|---------------------|
| | 19 Dec - 31 Dec 2022 | 1 Jan - 31 Dec 2022 |
| Total number of ILI notifications | 25 | 3322 |
| Number of swab tests performed | 8 | 1040 |
| % ILI patients tested | 32% | 31% |
| % of swab tests positive for influenza | 0% | 16% |
